Buyways A lot has changed since Towpath first rolled up its shutters 10 years ago on the Regent’s Canal in Hackney and everything but the toasted cheese sandwich was cooked from home across the bridge. And a lot hasn’t. It is still as much a social experiment as a unique and beloved eatery. What happens when seasonality means you close every year in November, because England’s cold, dark winters are simply inhospitable to hospitality from a little perch beside a shallow, manmade waterway that snakes through East London? What if you don’t offer takeaway coffees in the hopes that people will decide to stay awhile and watch the coots skittering across the water? If you don’t have a phone or a website, because you’d rather people just show up like (hungry) kids at a playground? Towpath is a collection of recipes, stories and photographs capturing the vibrant cafe’s food, community and place throughout the arc of its season – beginning just before the first breath of spring, through the dog days of summer and culminating – with fireworks! – before its painted shutters are rolled down again for winter.

Urban Mobility and Social Equity in Latin America Dialogues in Urban and Regional Planning, Volume 4 is a selection of some of the best scholarship in urban and regional planning from around the world. The internationally recognized authors of these award-winning papers take up a range of salient issues from the theory and practice of planning. The topics they address include planning and governance in Zimbabwe, rebuilding after Hurricane Katrina, safety issues in urban spaces, and an analysis of French transportation policies. The breadth of the topics covered in this book will appeal to all those with an interest in urban and regional planning, providing a springboard for further debate and research. The papers focus particularly on how planning institutions can meet contemporary environmental, demographic, economic, and socio-spatial challenges. The Dialogues books are published in association with the Global Planning Education Association Network (GPEAN) and its member planning schools associations. These associations represent 360 planning schools in nearly fifty countries around the globe. They have selected these papers based on regional competitions.

Complexity and Contradiction in Architecture The American suburb is a space dominated by architectural mass production, sprawl, as well as a monotonous aesthetic eclecticism, and many critics argue that it has developed from a postwar utopia into a disorienting environment with which it is difficult to identify. The typical suburb has come to display characteristics of an atopia, that is, a space without borders or even a non-place, a generic space of transience. Dealing with the representation of architecture and the built environment in suburban literature and film from the 1920s until present, this study demonstrates that in its fictional representations, too, suburbia has largely turned into a place of non-architecture. A lack of architectural ethos and an abundance of “Junkspace” define suburban narratives, causing an increasing sense of disorientation and entropy in fictional characters.

Managing Your Migraine: A manifesto for the Open City: vibrant, disordered, adaptable. In 1970 Richard Sennett published the groundbreaking The Uses of Disorder, that the ideal of a planned and ordered city was flawed, likely to produce a fragile, restrictive urban environment. Fifty years later, Sennett returns to these still fertile ideas and alongside campaigner and architect, Pablo Sendra, sets out an agenda for the design and ethics of the Open City. The public spaces of our cities are under siege from planners, privatisation and increased surveillance. Our streets are becoming ever more lifeless and ordered. What is to be done? Can disorder be designed? Is it possible to maintain the public realm as a flexible space that adapts over time? In this provocative essay Sendra and Sennett propose a reorganisation of how we think and plan the social life of our cities. What the authors call ‘Infrastructures of disorder’ combine architecture, politics, urban planning and activism in order to develop places that nurture rather than stifle, bring together rather than divide up, remain open to change rather than closed off. The book proves that ideas of disorder are still some of the most radical and transformative in debates on 21st century cities.

The World Beyond the Windshield: Cities have been some of the most visible manifestations of the evolution of globalization and population expansion, and global cities are at the cutting edge of such changes. Critical Dialogues of Urban Governance, Development and Activism examines changes in governance, property development, urban politics, and community activism in two key global cities: London and Toronto. By taking these two cities as empirical cases, the book engages in constructive dialogues about the forms, governmental mechanisms and practices, and policy and community-based responses to the concerns facing modern urban centers. Through three central issues, governance, real estate and housing, and community activism and engagement, the authors seek to understand London and Toronto from a nuanced perspective, promoting critical reflection on the experiences and evaluative critiques of each urban context, providing insight into each city’s trajectory and engaging critically with wider phenomena and influences on the urban governance challenges in cities beyond.

God’s Own Junkyard For better or worse, the view through a car’s windshield has redefined how we see the world around us. In some cases, such as the American parkway, the view from the road was the be-all and end-all of the highway; in others, such as the Italian autostrada, the view of a fast, efficient transportation machine celebrating either Fascism or its absence was the goal. These varied environments are neither necessary nor accidental but the outcomes of historical negotiations, and whether we abhor them or take delight in them, they have become part of the fabric of human existence. The World beyond the Windshield: Roads and Landscapes in the United States and Europe is the first systematic, comparative look at these landscapes. By looking at examples from the United States and Europe, the chapters in this volume explore the relationship between the road and the landscape that it traverses, cuts through, defines, despoils, and enhances. The authors analyze the Washington Beltway and the Blue Ridge Parkway, as well as iconic roads in Italy, Nazi Germany, East Germany, and Great Britain. This is a story of the transatlantic exchange of ideas about environment and technology and of the national and nationalistic appropriations of such landscaping.

Planning in the USA An exploration of the architecture of dormitories that exposes deeply held American beliefs about education, youth, and citizenship Every fall on move-in day, parents tearfully bid farewell to their beloved sons and daughters at college dormitories: it is an age-old ritual. The residence hall has come to mark the threshold between childhood and adulthood, housing young people during a transformational time in their lives. Whether a Gothic stone pile, a quaint Colonial box, or a concrete slab, the dormitory is decidedly unhomelike, yet it takes center stage in the dramatic arc of many American families. This richly illustrated book examines the architecture of dormitories in the United States from the eighteenth century to 1968, asking fundamental questions: Why have American educators believed for so long that housing students is essential to educating them? And how has architecture validated that idea? Living on Campus is the first architectural history of this critical building type. Grounded in extensive archival research, Carla Yanni’s study highlights the opinions of architects, professors, and deans, and also includes the voices of students. For centuries, academic leaders in the United States asserted that on-campus living enhanced the moral character of youth; that somewhat dubious claim nonetheless influenced the design and planning of these ubiquitous yet often overlooked campus buildings. Through nuanced architectural analysis and detailed social history, Yanni offers unexpected glimpses into the past: double-loaded corridors (which made surveillance easy but echoed with noise), staircase plans (which prevented roughhousing but offered no communal space), lavish lounges in women’s halls (intended to civilize male visitors), specially designed upholstered benches for courting couples, mixed-gender saunas for students in the radical 1960s, and lazy rivers for the twenty-first century’s stressed-out undergraduates. Against the backdrop of sweeping societal changes, communal living endured because it bolstered networking, if not studying. Housing policies often enabled discrimination according to class, race, and gender, despite the fact that deans envisioned the residence hall as a democratic alternative to the elitist fraternity. Yanni focuses on the dormitory as a place of exclusion as much as a site of fellowship, and considers the uncertain future of residence halls in the age of distance learning.

1981 Summer Faculty Workshop for Minority Institution Faculty Inclusive Urban Development in the Global South emphasizes the importance of the neighbourhood in urban development planning, with case studies aimed at transforming current intervention practices towards more inclusive and just means of engagement with individuals and communities. The chapters explore how diversity of gender, class, race and ethnicity, citizenship status, age, ability, and sexuality is taken (or not taken) into account and approached in the planning and implementation of development policy and interventions in poor urban areas. The book employs a practical perspective on the deployment of theoretical critiques of intersectionality and diversity in development practice through case studies examining issues such as water and sanitation planning in Dhaka, indigenous rights to the city in Bolivia, post-colonial planning in Hong Kong, land reform in Zimbabwe, and many more. The book focuses on radical alternatives with the potential to foster urban transformations for planning and development communities working around the world.

Housing and Planning References For the past half-century, the planning system has operated on the basis of a growth-dependence paradigm. It has been based on market-led urban development and has sought to provide community benefits from a share of development profits. However, we do not live in a world where growth can be taken for granted and we are more aware than previously of the implications for well-being and sustainability. This timely book provides a fresh analysis of the limitations of the growth-dependence planning paradigm. It considers alternative urban development models, ways of protecting and enhancing existing low value land uses and means of managing community assets within the built environment. In each case it spells out the role that a reformed planning system could play in establishing a new agenda for planning. The book will be of relevance to planning students, planning professionals and planning academics, as well as urban policy specialists more generally.

Dialogues in Urban and Regional Planning This collection of essays on ecological landscape design and planning stresses the preservation and enhancement of the ecological function of the site being designed. It discusses a central issue of the field -- the incorporation of ecological principles in landscape design and planning. It addresses the growing rift in landscape design between those who regard ecology as the governing criterion for design, and those who regard aesthetics as primary.

God’s Own Junkyard This revised edition continues to provide a comprehensive introduction to the policies and practices of planning. Discussing land use, urban planning and environmental protection policies, the text explains the nature of the planning process.

Planning Practice It is a major challenge to write the history of post-WWII architectural theory without boiling it down to a few defining paradigms. An impressive anthologising effort during the 1990s charted architectural theory mostly via the various theoretical frameworks employed, such as critical theory, critical regionalism, deconstructivism, and pragmatism. Yet the intellectual contours of what constitutes architectural theory have been constantly in flux. It is therefore paramount to ask what kind of knowledge has become important in the recent history of architectural theory and how the resulting figure of knowledge sets the conditions for the actual arguments made. The contributions in this volume focus on institutional, geographical, rhetorical, and other conditioning factors. They thus screen the unspoken rules of engagement that postwar architectural theory ascribed to.

1981 UMTA Summer Faculty Workshop for Minority Institution Faculty Landscape is a vital, synergistic concept which opens up ways of thinking about many of the problems which beset our contemporary world, such as climate change, social alienation, environmental degradation, loss of biodiversity and destruction of heritage. As a concept, landscape does not respect disciplinary boundaries. Indeed, many academic disciplines have found the concept so important, it has been used as a qualifier that delineates whole sub-disciplines: landscape ecology, landscape planning, landscape archaeology, and so forth. In other cases, landscape studies progress under a broader banner, such as heritage studies or cultural geography. Yet it does not always mean the same thing in all of these contexts. The Routledge Companion to Landscape Studies offers the first comprehensive attempt to explore research directions into the many uses and meanings of ‘landscape’. The Companion contains thirty-nine original contributions from leading scholars within the field, which have been divided into four parts: Experiencing Landscape; Landscape Culture and Heritage; Landscape, Society and Justice; and Design and Planning for Landscape. Topics covered range from phenomenological approaches to landscape, to the consideration of landscape as a repository of human culture; from ideas of identity and belonging, to issues of power and hegemony; and from discussions of participatory planning and design to the call for new imaginaries in a time of global and environmental crisis. Each contribution explores the future development of different conceptual and theoretical approaches, as well as recent empirical

contributions to knowledge and understanding. Collectively, they encourage dialogue across disciplinary barriers and reflection upon the implications of research findings for local, national and international policy in relation to landscape. This Companion provides up-to-date critical reviews of state of the art perspectives across this multifaceted field, embracing disciplines such as anthropology, archaeology, cultural studies, geography, landscape planning, landscape architecture, countryside management, forestry, heritage studies, ecology, and fine art. It serves as an invaluable point of reference for scholars, researchers and graduate students alike, engaging in the field of landscape studies.

The Future of Planning A little girl wants a pet. She’s not fussy, any will do. Her mother said no to a bird and bunny and trained seal. Then she agrees to the sloth, Sparky! Sloths don’t know how to fetch. Or roll over. But they sure know how to play dead. What’s an eager pet owner to do?

Designing Disorder This volume provides a comprehensive discussion and overview of urban resilience, including socio-ecological and economic hazard and disaster resilience. It provides a summary of state of the art thinking on resilience, the different approaches, tools and methodologies for understanding the subject in urban contexts, and brings together related reflections and initiatives. Throughout the different chapters, the handbook critically examines and reviews the resilience concept from various disciplinary and professional perspectives. It also discusses major urban crises, past and recent, and the generic lessons they provide for resilience. In this context, the authors provide case studies from different places and times, including historical material and contemporary examples, and studies that offer concrete guidance on how to approach urban resilience. Other chapters focus on how current understanding of urban systems – such as shrinking cities, green infrastructure, disaster volunteerism, and urban energy systems – are affecting the capacity of urban citizens, settlements and nation-states to respond to different forms and levels of stressors and shocks. The handbook concludes with a synthesis of the state of the art knowledge on resilience and points the way forward in refining the conceptualization and application of urban resilience. The book is intended for scholars and graduate students in urban studies, environmental and sustainability studies, geography, planning, architecture, urban design, political science and sociology, for whom it will provide an invaluable and up-to-date guide to current approaches across these disciplines that converge in the study of urban resilience. The book also provides important direction to practitioners and civic leaders who are engaged in supporting cities and regions to position themselves for resilience in the face of climate change, unpredictable socioenvironmental shocks and incremental risk accumulation.
